## **Sonexis Provides Blast Dialing and Emergency Management Conferencing Features**

Tewksbury, Mass, April 21, 2009 – Sonexis Technology, Inc., the innovator of the ConferenceManager™ enterprise conferencing platform, announced today software version 9.1 which boasts blast dial and emergency management functionality. The release will be available in May and builds upon the already broad and feature-rich capabilities of the platform.

This latest version enables the immediate assembly of a conference call to facilitate productive, interactive conversations with key personnel to drive towards a quick resolution of an issue. The functionality is ideal for organizations that require emergency conferences to quickly join together first responders across corporate campuses, airports, sea ports, college and university campuses, military bases, and city centers. The ConferenceManager 9.1 release is also compelling for enterprises that need to connect team members quickly and efficiently for business continuity, resolve crisis situations and discuss next steps for executive teams, senior staff, IT, customer care and sales teams. Valuable time is no longer lost pulling together the appropriate personnel to address a critical concern.

“This latest platform release enables immediate and robust communication for emergency management and business continuity scenarios,” commented Mr. Dan Watkins, Sonexis Executive Vice President. “Real-time communication is ready and available on the ConferenceManager to assist enterprises with their immediate and crisis-related conferencing requirements.”

### **About Sonexis, Inc.**
